

Jimtown Nicki Nitro

BW Marshall x EX91 Mattie G x VG87 Commotion x VG89 Blackstar x EX90 Valiant x EX90 Bell x EX91 Pete

Jimtown Nicki Nitro is by the very successful sire of sons Mara-Thon BW Marshall. Nitro has a very impressive 100% US pedigree, being backed by six generations of VG or EX dams. His dam is the EX91 Mattie G daughter Jimtown Mattei Nicki, who is a maternal sister to the bull Jimtown Nita Nelson and the popular bull dam Ronland Nita Merv Natasha EX92-3E. Behind Nitro's dam we find a VG87 daughter of Commotion and then a VG89 Blackstar, followed by three Excellent cows by Valiant, Bell and Straight-Pine Elevation Pete.

Breeding pattern

Nitro is one of the highest bulls for milk in the HG stud and he also shows very high type figures. He breeds very tall cows with deep, open ribs. The udders of his daughters are very good and particularly impressive in the rear where they show a lot of height and very strong ligaments. Nitro daughters walk on a good set of feet and legs, with the leg set being parallel seen from the rear.

Use Nitro, who needs some protection for udder health, to improve milk production and on small and round cows that need more stature and dairyness. He will work well on daughters of, for example, Grandprix, Lorenzo and Kian.

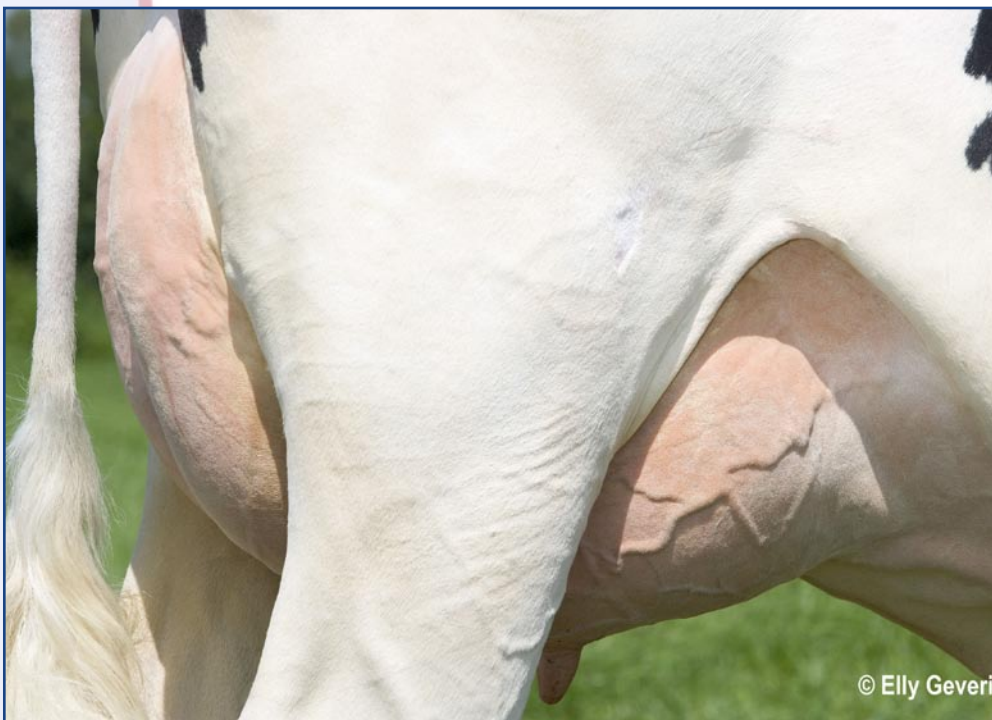

Jimtown Mattei Nicki EX91, dam of Jimtown Nicki Nitro
